

Help

Search Page

The search page allows you to search for species by typing the common name or scientific name of the species into the search bar. You can also search for species by state and county/parish by typing this information into the search bar. After performing a search, you can filter results by location, taxonomy, habitat, and date.

What's Around Me

By clicking the What's Around Me button, you can view the different species that are near your location on a map.

Map Page

The map page allows you to view the occurrences of a species by typing the common name or scientific name of the species into a search bar. You can view the occurrences of a species in a state, county/parish, or a certain radius from your position.

Personal Recordings

The personal recordings page allows you to record your own sighting of a species. You can record the location that you saw the species as well as an image and/or sound recording of the sighting. This feature is helpful if you would like to remember where you saw a species for future reference.

Image Recognition

You can upload an image of an unknown species and the application will determine the scientific and common name of the species.
