Feature: Search for species by county/parish

      Scenario: The user performs a search for species in a county/state combination that exist
          Given The user has typed the county and state in the search box in the following form
              "County, State"
          When The user clicks the search button
          Then Species results will be displayed for the county/parish

      Scenario: The user mistypes and performs a search on a county/state combination that does

              not exist
          Given The user has typed a county/state combination that does not exist into the
              search box
          When The user clicks the search button
          Then An error message pops up telling the user the search was invalid

      Scenario: The user searches by county without typing anything in the search box
          Given The user has not typed anything in the search box
          When The user clicks the search button
          Then An error message pops up telling the user the search was invalid

Feature: Search for species by common/scientific name

    Scenario: The user searches for a species by entering a valid common/scientific name
       Given That the user enters an existing species name into the search box
       When The user clicks the go button
       Then A single species with its common name preceding its scientific name should be
       displayed as a selectable result

    Scenario: The user searches for a species by entering an invalid/misspelled species name
       Given That the user enters a non-existing species name into the search box
       When The user clicks the go button
       Then An error dialog will tell the user that a valid species name must be entered

    Scenario: The user views more info about a species by clicking on a search result
       Given That the user searches for a species
         And The user clicks the go button
       When The user clicks the species results
       Then The species info page will be presented to the user

Feature: Radio button group - search type

    Scenario: The application is closed and user first opens the application

        Given That the application is closed

        When The user opens the application

        Then The default search type is marked as scientific/common name

    Scenario: The application is currently open

        Given That the application is currently open

        When The user touches a different search type than what is currently selected

        Then The current button is unchecked

        And The new button is then checked

Feature: Radio button - county search type

    Scenario: The user has the county search type selected

        Given That the user has selected the county search type

        When The user enters a county and state name

        Then The search will run for that given county

Feature: Radio button - state search type

    Scenario: The user has the state search type selected

        Given That the user has selected the state search type

        When The user enters a state

        Then The search will run for that given state
